AMADAS Hi-Speed Stalk Puller/Choppers provide a unique, integrated system for extracting harvested cotton stalks including the root system, and then chopping them into smaller pieces.

The major advantage of this system over conventional mowing, is that the crops’ root system is removed which allows you to more effectively break up the life cycle of insects and diseases that overwinter in the remaining stalk and root system normally left behind by shredders and mowers.

For each row, tandem, shafted mounted, heavy-duty turf tires rotate against one another to grip the stalks while the forward momentum of the tractor pulling the machine extracts the stalks and lays them on the ground where they are then cut into pieces by the chopping rotor system which follows behind.

AMADAS Stalk Puller/Choppers are designed to operate at high speeds, handle the toughest stalks, and can be adjusted for operation in different row widths and soil conditions.
AMADAS INDUSTRIES

Hi-speed Stalk Puller / Chopper

SPECIFICATIONS

FRAME:
Heavy-duty, welded box construction with 6" x 10" mainframe.

CHOPPING SYSTEM:
Eight, drum mounted, double beveled, replaceable, hardened steel blades per row provide linear rotary cutting action.

DRIVE SYSTEM:
Ground driven with #80 chain through gearbox and interconnected with pulling wheel drive mechanism to provide fixed, variable speed, calibration between pulling wheel turning speed and rotary blade cutting system speed.

Number of Blades:  
- SPC-4 - 32
- SPC-6 - 60

Drum Diameter:
- SPC-4 - 12"
- SPC-6 - 16"
